**BEST CONSTRUCTION MATERIAL &
CHEMICAL
MANUFACTURERS AND SUPPLIERS**

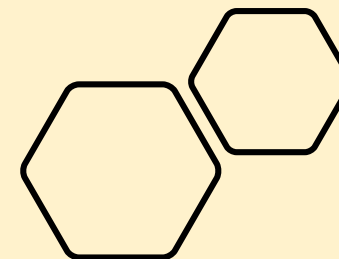

ABOUT US

Cempoll Construction Chemicals was founded by **Mr. Milind E Pawar** in **2013** with a moto to serve Construction Industry with best of the construction essential products and admixtures. We are leading Manufacturer of a wide range of Premix Mortars, Industrial Flooring, Concrete Repairs, Water Proofing products, Protective Coating, Ready Mix Plaster, Tile Adhesives, Admixtures etc.

With over 30 years of experience in construction field Mr Pawar with his expertise and advanced technology machines, have been able to offer a wide range of products in bulk quantity. Products offered by us are affordable and environment friendly and are prepared with quality tested material under timely supervision to provide maximum performance and long lasting effect.

OUR RANGE OF PRODUCTS:

- Ready-mix plaster
- Concrete Admixtures
- Repair Mortar
- AAC Jointing Mortar
- Gray Course Putty
- Tile Adhesives (Flooring and Wall Cladding)
- Non-Metallic Floor Hardener
- Tile Grout
- Waterproofing Slurry and Chemicals

Cempoll Construction Chemicals

PRODUCTS

SERVICES

OUR PRODUCTS AND SERVICES

PRODUCTS

1. PLASTICIZER
2. COMBO-HARDENER
3. RETARDER
4. READY MIX PLASTER
5. TILE ADHESIVE
6. MICRO CONCRETE
7. AAC JOINT MORTAR
8. REPAIR MORTAR
9. FLOOR HARDENER
10. FINE WALL PUTTY
11. GRAY COARSE PUTTY

SERVICES

1. POLYMER BASED WATERPROOFING SLURRY COATING
2. ELASTOMERIC WATER PROOFING COATING
3. REPAIR MORTAR
4. WATERPROOFING WITH FIBER MESH
5. BONDING CHEMICALS
6. CRACK FILLERS

* Water proofing done with the mentioned CEMPOLL Products

CEMPOLL PLASTICIZER

CEMPOLL plasticizer is a high range water reducing plasticizer for High Performance Pre-cast concrete based on Poly-carboxylic Ether. It also works as a high range water reducer with water reduction up to 15-18 %. It is used to make the concrete denser and more durable while -improving its cohesion. This leads to better pumping of concrete, rapid placing and little or no vibration.

Dosage

150 ML per bag of cement (depending on site requirement)

CEMPOLL COMBO-HARDENER

Our **CEMPOLL** Combo- Hardener is chloride base. It adds to the strength of the overall concrete and accelerates the setting time as well. It is used extensively in all types of concrete products(PCC).

Dosage

500ml – 1.2 L per cement bag

CEMPOLL RETARDER

CEMPOLL retarder is gluconate base. Retarders for concrete are used to delay the initial setting time of the concrete. They are generally used in the hot weather condition to counter the rapid hardening due to high temperature, thus allowing the time for mixing, transporting and placing.

READY MIX PLASTER (40 KG BAG) :

CEMPOLL Ready Mix Plaster is a blend of ordinary Portland cement, silica sand, crushed sand, fine graded sand and high quality admixtures, in the right proportions. It is ready to use by simply mixing water at the site and can be easily applied on brick, block and concrete surfaces.

ADVANTAGES:

- **Compact plaster, reduce void gaps**
- **Negligible silt content**
- **Reduces rebounding**
- **CEMPOLL Ready-Mix Plaster provides highly durable plaster that cuts repair the maintenance cost**

AAC JOINT MORTAR (40 KG BAG) :

CEMPOLL AAC Joint Mortar is a Portland cement based powder mix which is polymer modified. The formulation includes selected high quality graded sands, special shrinkage compensating components plus powerful plasticizing agents which produce a workable thixotropic mortar at a low water content. The resulting mix enables thin joints between thermal blocks to be made. Horizontal and vertical joints are formed down to 3mm in thickness. These thin joints contribute to the maintenance of built wall U-values. Joint Mortar is supplied ready for onsite use requiring only the addition of measured mixing water. The mixed mortar will remain workable for two hours.

REPAIR MORTAR (40 KG BAG) :

Deterioration of concrete structures can happen for many reasons such as corrosion, structural damage, water infiltration etc. Many years of practical experience have enabled CEMPOLL to develop full comprehensive mortar solutions to repair, restore and rehabilitate concrete structures.

Key characteristics of our concrete repair mortars:

- Cost effective solution
- High build mortars
- Strong adhesion
- Smooth finishing

FINE WALL PUTTY (40 KG BAG) :

CEMPOLL Fine Putty is a white cement based putty. It provides a protective base for your expensive paints. It's superior water resisting properties prevent the paint from flaking even if the walls are damp. It's used to fill fine pores in walls and ceilings, so you get the smooth, dry surface that's so essential for painting. **CEMPOLL** fine putty has better water-resistance, adhesive strength and durability than ordinary putties. Being cement based it has better compatibility with the base plaster and forms a durable base for paints. It can be applied on both, interior and exterior walls.

GRAY COARSE PUTTY (40 KG BAG) :

CEMPOLL Coarse Putty is a coarse powder specially formulated to be used as base coat. It covers up undulation and can be used as a layer prior to use of CEMPOLL Fine wall putty or any painting system. It Provides damp and weather resistant finish for further application of all kind of paints (Damp resistance means resistance to water in humid air & not to physical water leakages). It gives matt finish.

MICRO CONCRETE (30 KG BAG) :

CEMPOLL Micro Concrete is a dry ready mix Cementitious based composition formulated for use in repairs of areas where the concrete is damaged & the area is restricted in movement making the placement of conventional concrete difficult., It is supplied as a ready to use dry powder which requires only addition of clean water at site to produce a free flowing non shrink repair micro concrete. For the repair of damaged reinforced concrete elements like beams, columns, wall etc., where access is restricted and compaction is not possible. Also for Jacketing of RCC columns to increase its load bearing capacity.

CEMPOLL FLOOR HARDENER (25 KG BAG) :

FLOOR HARDENER is a non – metallic powder hardener in four colour viz. grey, green, red and yellow. It consists of selected and graded hard aggregate, Portland cement and other additives to improve placing and additional hardening.

TILE ADHESIVE (20 KG BAG) :

CEMPOLL Tile Adhesive for Tile-on-Tile Application is a single component cement based polymer modified adhesive for fixing tiles over tiles on floors and walls in interiors as well as exteriors. The product contains special additives that provide excellent bonding & grabbing properties.

ADVANTAGES:

- **Fast and efficient.**
- **Easy to use, only mix with water.**
- **Better bonding strength.**

POLYMER BASED WATERPROOFING SLURRY

CEMPOLL waterproofing slurry designed by CEMPOLL construction chemical is used to stop water leakage problems. The product is so strong that we need not to worry about leakages for next 6 years. This Polymer base slurry by CEMPOLL will guarantee you the perfect results. Just 2 coats of slurry and your slab or wall is waterproofed.

CEMENTITIOUS WATERPROOFING

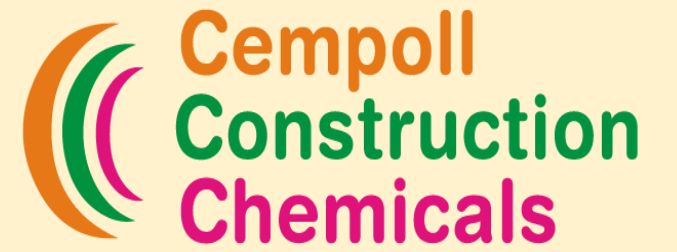

Cementitious waterproofing slurries have been used successfully to protect a wide range of buildings and structural components exposed to either periodic or long-term wetting, low hydrostatic pressure or, in combination with appropriate engineering, even high hydrostatic pressure. Cementitious slurries are used for waterproofing wet rooms and water tanks and, due to their excellent weathering resistance, also for exterior surface protection. Typical applications are the sealing and waterproofing of e.g., terraces, basement walls, water tanks, swimming pools, walls and floors in wet-rooms such as toilets and bathrooms.

ELASTOMERIC WATERPROOFING COATING

These coatings / polymer paints are blended with specialised polymers to give highly flexible and crack bridging coatings which show excellent waterproofing properties as well. They show excellent UV resistant and anti-microbial properties as well and are available in different colours.

WATER PROOFING SOLUTIONS

**HE TOO HAD NEVER EXPECTED THIS...
So just don't Wait for it and CALL CEMPOLL NOW....**

SERVICES

CEMPOLL construction chemicals provide waterproofing services in the districts of Satara, Kolhapur, Pune, Sangli. With its market leading waterproofing products CEMPOLL guarantees you the life of waterproofed surface upto 10 years. We have different methods for different types of surfaces.

SERVICES

Water proofing done with the below CEMPOLL Products

- 1. POLYMER BASE SLURRY**
- 2. ELASTOMERIC WATER PROOFING CHEMICAL**
- 3. REPAIR MORTAR**
- 4. WATERPROOFING WITH FIBER MESH**
- 5. BONDING CHEMICALS**
- 6. CRACK FILLERS**
